Telluride Housing Authority Subcommittee

Telluride Housing Authority Subcommittee

The Telluride Housing Authority Subcommittee is a subcommittee of the Telluride Housing Authority (THA) which, upon direction, provides recommendations regarding projects and policies to the Telluride Town Council and the full THA Board. Pursuant to past direction, the THA Subcommittee has overseen the design and development of several Town-constructed housing and multi-use projects.

Purpose of the Lot L Feasibility Study & Concept Plan

Building upon the Southwest Area Conceptual Plan

The Telluride Town Council initiated the Conceptual Planning process in 2019 to determine how best to utilize Town of Telluride (Town) and Telluride Housing Authority (THA) owned parcels assembled generally south of the San Miguel River and west of Davis Street and identifies general land use approaches and opportunities for these publicly owned parcels and the surrounding streets and pedestrian network. The plan indicates a range of potential land uses for the various sites and circulation alternates and does not constitute a detailed site plan.

The Lot L Feasibility Study and Concept Plan will build upon the recommendations in the Southwest Area Conceptual Plan.

Goals for the Lot L Feasibility Study & Concept Plan

The central purpose of the Feasibility Study and Conceptual Plan is to determine the feasibility of, and develop a conceptual plan for, the outlined programmatic uses on Lot L. The Subcommittee anticipates finalizing the overall programmatic goals and uses for the Project and incorporate important development considerations and anticipated key components of the Feasibility Study and Conceptual Plan.

Recommended land uses and redevelopment goals for the area of the Shandoka Apartments/Lot L are to expand the number of resident-occupied, affordable and employee housing units; to improve the quality of the Shandoka neighborhood through the redevelopment/ replacement of the existing units; to create a broad range of residential units in terms of housing type and tenure; to add and improve the neighborhood amenities such as childcare, playgrounds, pocket parks and public spaces; and to add neighborhood-serving commercial uses. Also recommended for this site is to increase intercept parking for commuters and provide transit-oriented uses proximate to parking and a new local/regional transit hub; provide parking for others requiring day-long parking, such as skiers; and potentially provide limited overnight parking for the community.

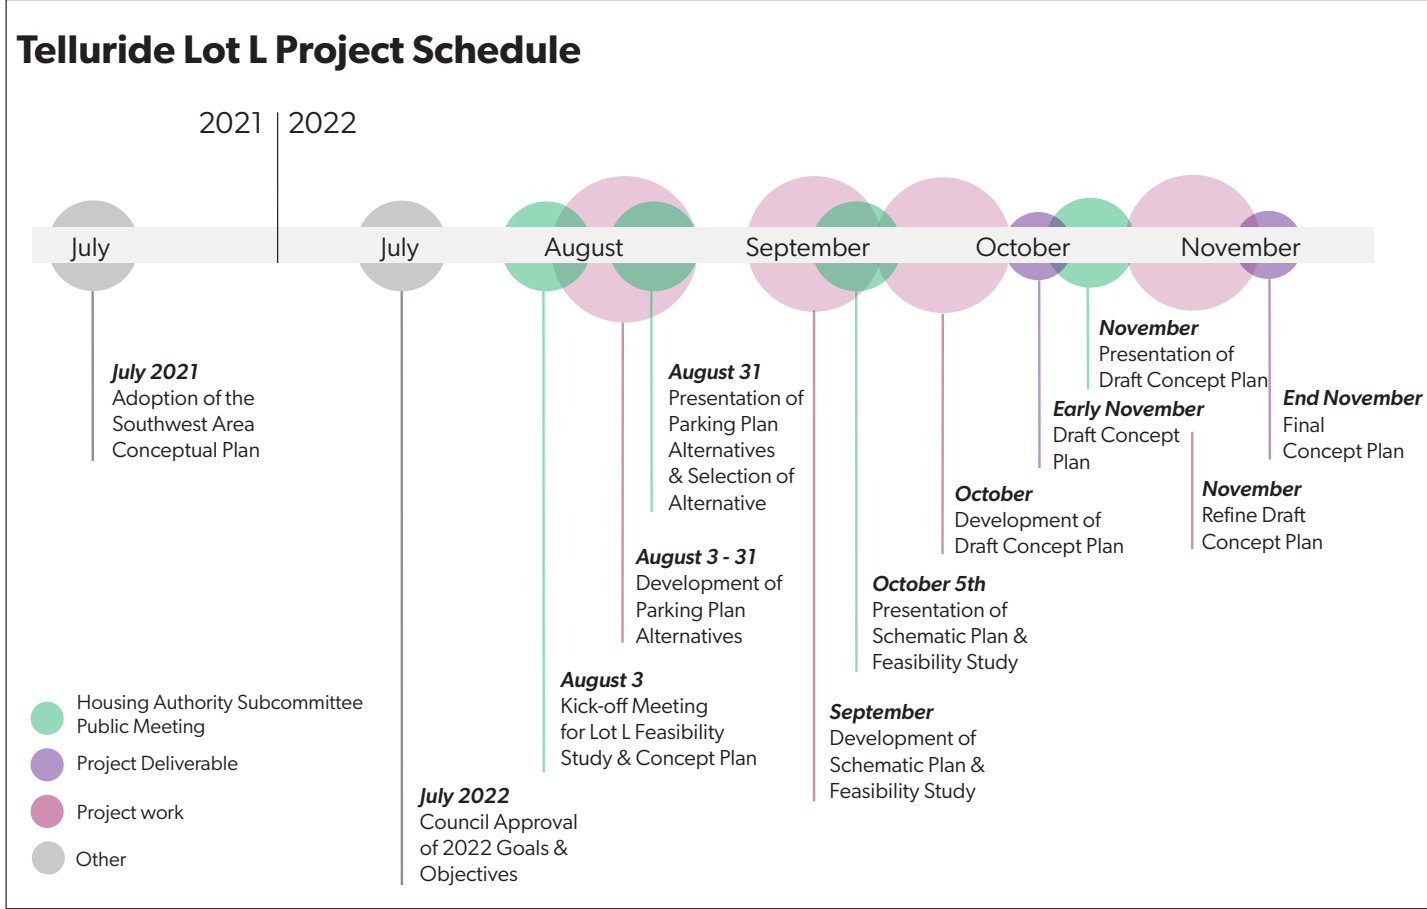

Timeline

Process

August 3	Step 1 Kick-off meeting/Site Visit (Committee Meeting/Public Meeting #1)
August 31	Step 2 Concept Plan Alternatives (Committee Meeting/Public Meeting #2)
October 5	Step 3 Schematic Plan of Selected Alternative (Committee Meeting #3)
November 2	Draft Final Plan (Committee Meeting #4)
November 16	Final Plan

Project Schedule

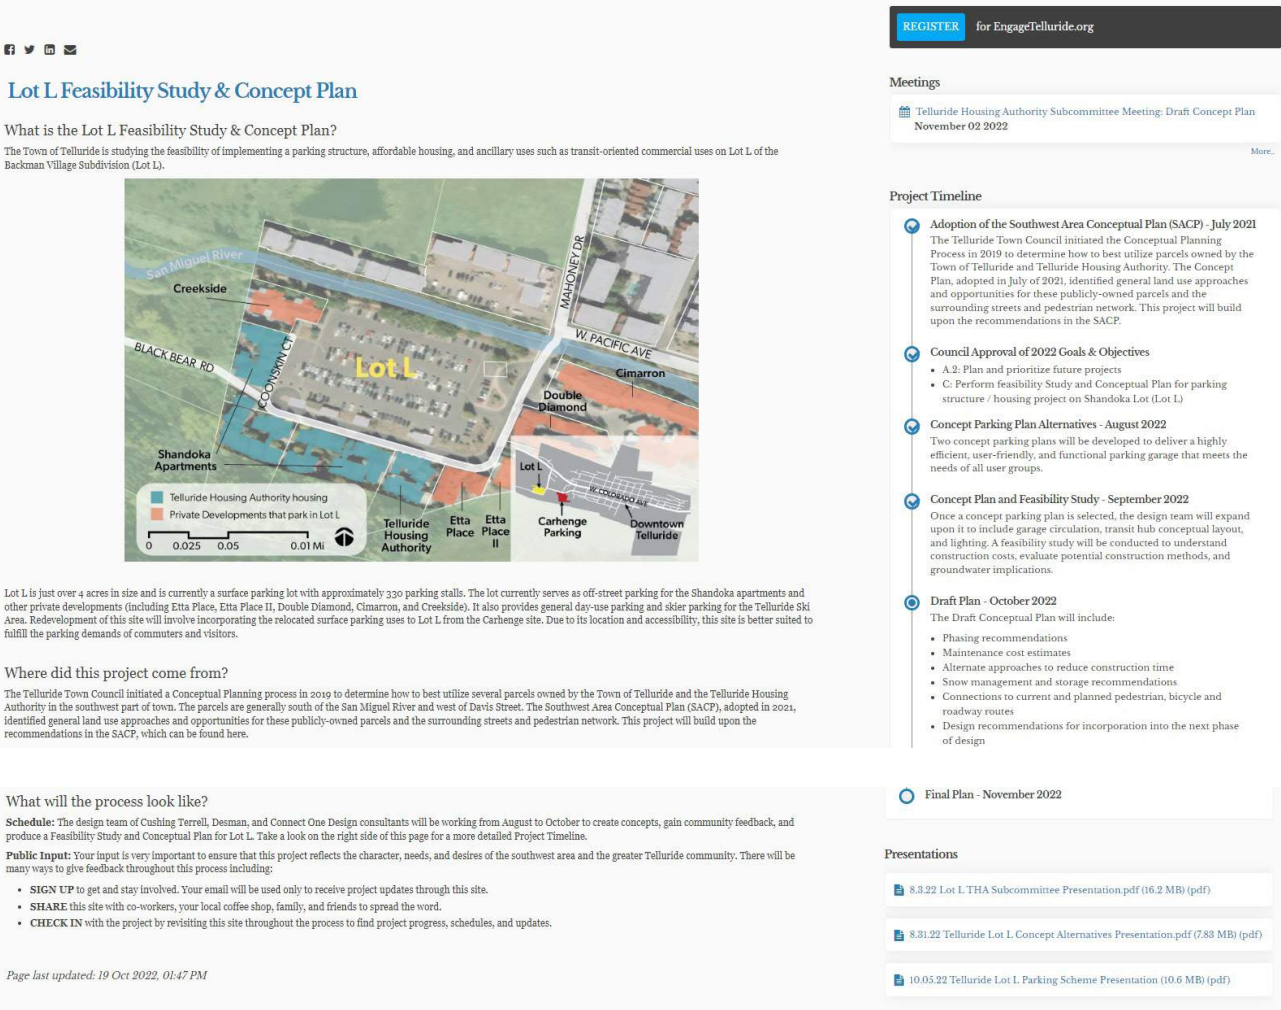

Project Website

Engagetelluride.org/Lot-L

Utilizing the City’s recently-purchased Bang the Table platform, a project website was launched on August 31, 2022 to share progress on the Lot L Feasibility Study & Concept Plan. The site hosted critical information about the project and the planning efforts leading up to it. Site visitors could register to stay engaged, which subscribed them to the newsletter which sends out notifications with project updates and upcoming meetings. Telluride Housing Authority (THA) Subcommittee meetings were advertised on the site, and presentations were available the Friday before each monthly meeting.

Community input on the project was critical to ensure that the program reflected the needs and desires of the southwest area, and that the design complemented the existing neighborhood’s character. Special thanks to community members who participated in the planning process and helped shape the final plan.

About Lot L

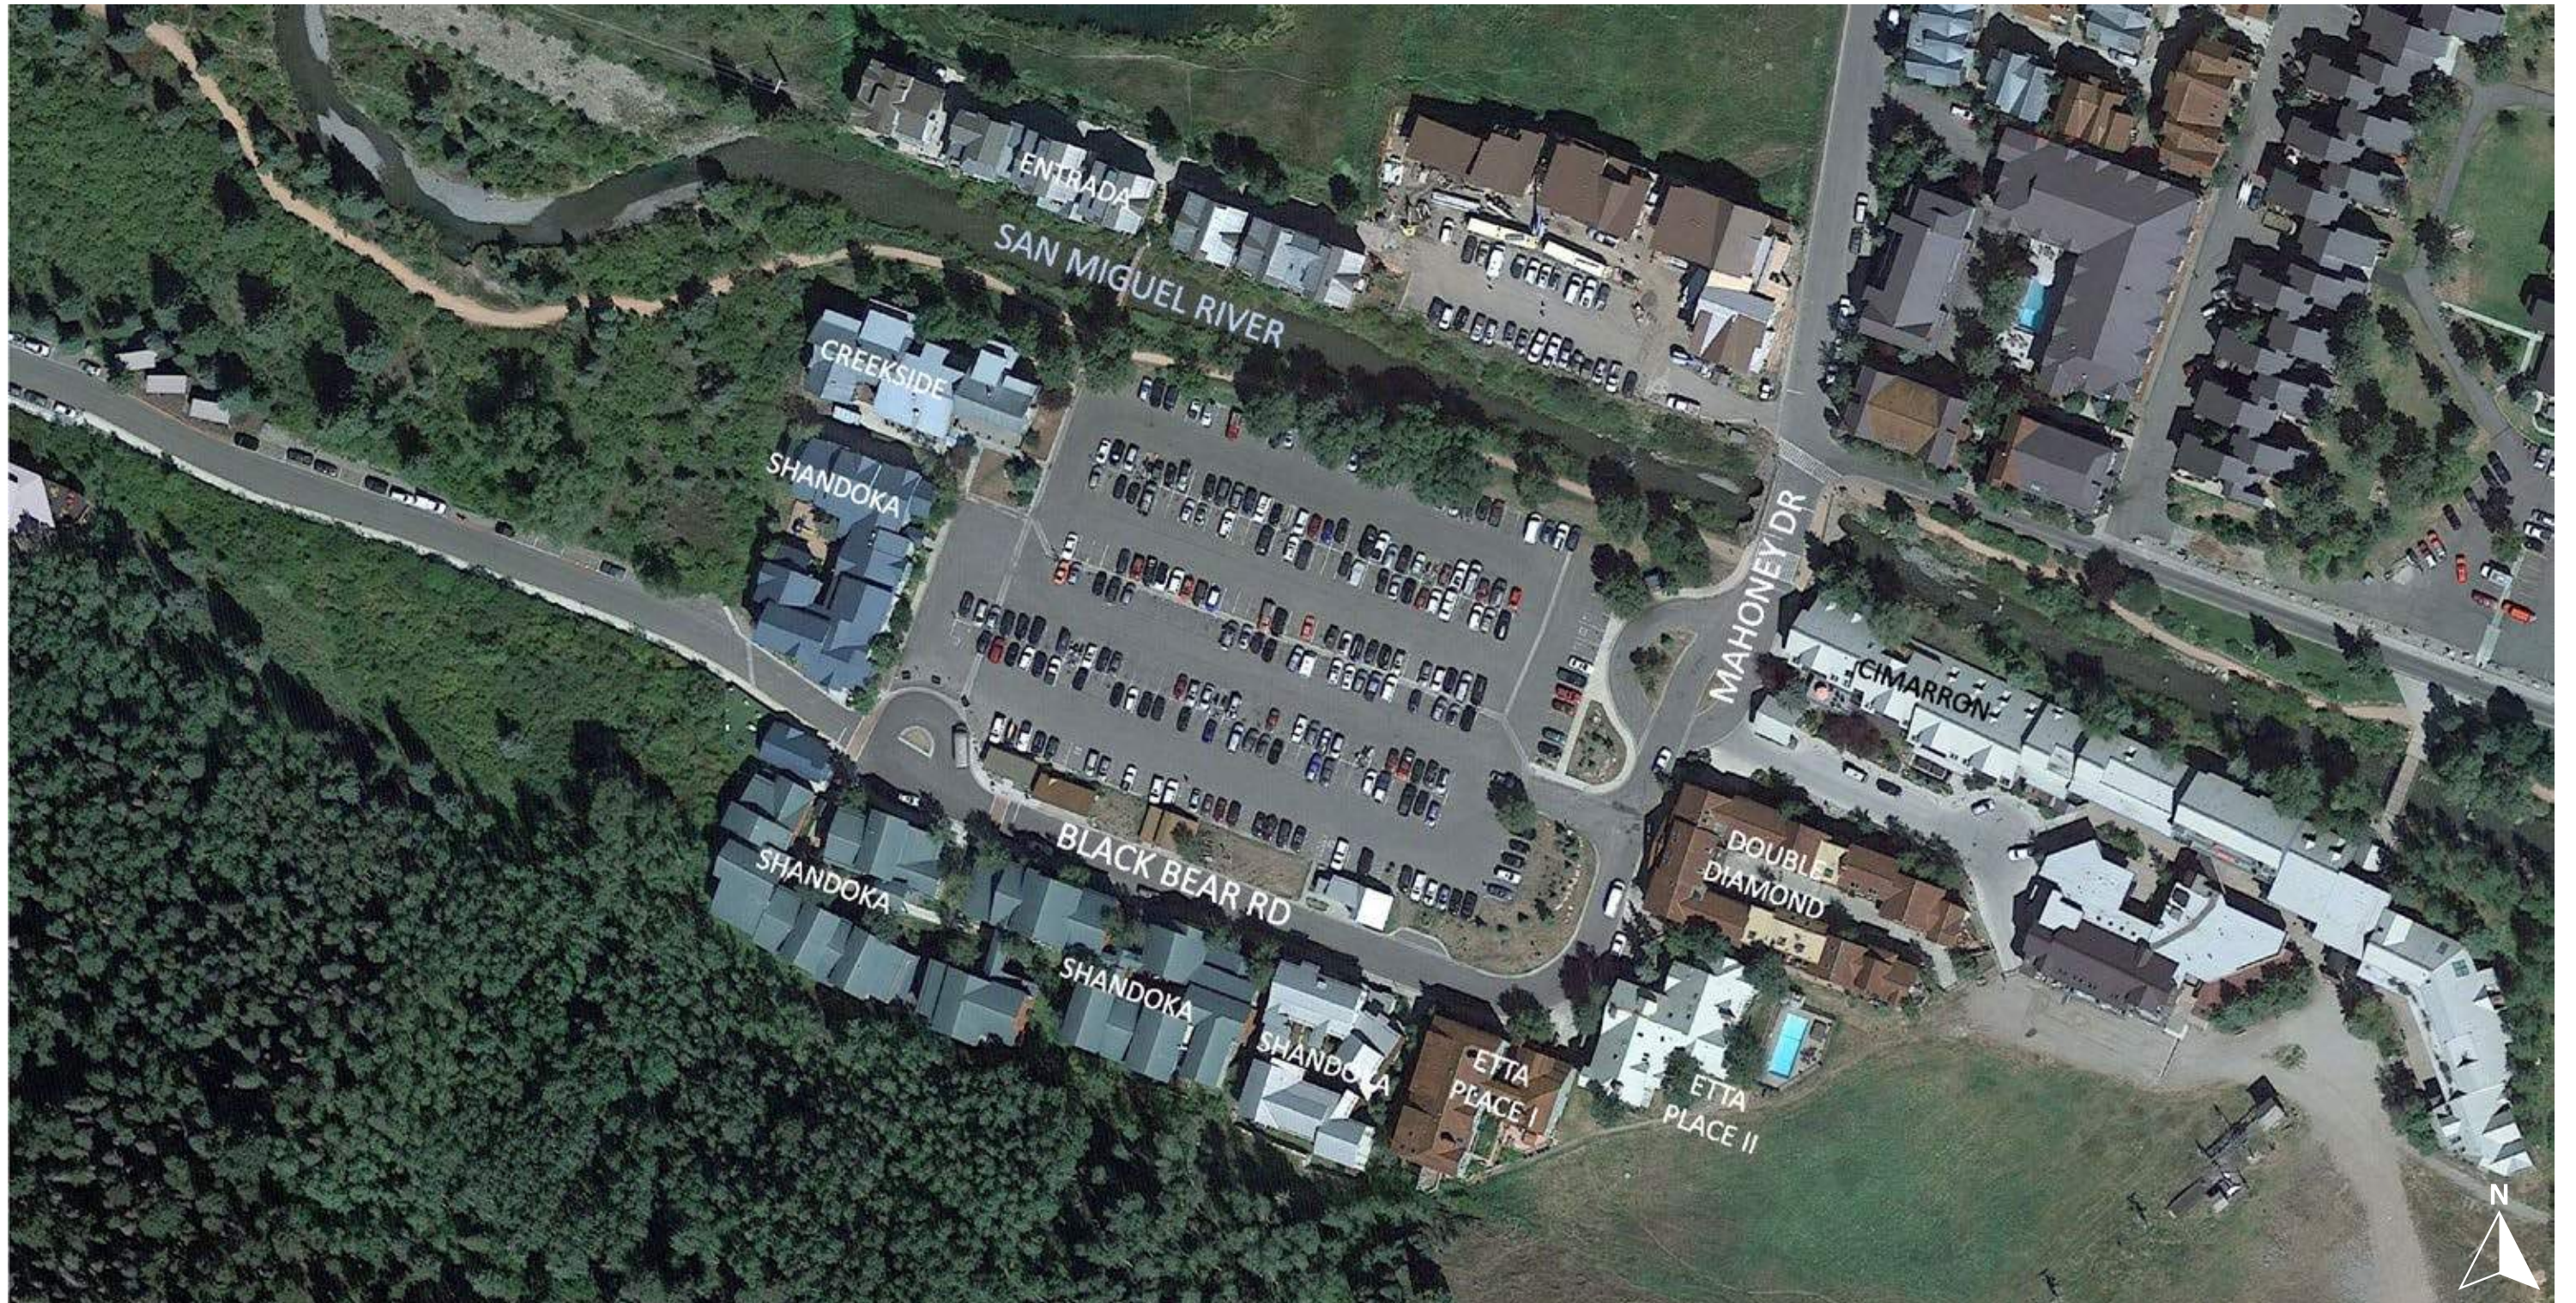

The purpose of Town-owned Lot L parking lot is to satisfy/ provide the required parking for Shandoka apartment residents as well as residents in the nearby Etta Place, Etta Place II, Double Diamond, Cimarron (portion), and Creekside developments. The parking lot also provides public parking, and skier parking as part of the ski area’s obligation under its Special Use Permit with the USFS. Redevelopment of this site would involve incorporating the relocated surface parking and fulfill the parking demands of commuters and visitors due to its location and accessibility.

4.2 GUIDING CONCEPTS/PRINCIPLES FOR DEVELOPMENT

When implementing or proceeding with site specific development plans on the publicly-owned lands, the following planning concepts and principles should guide future development:

1. Create new, resident-occupied neighborhoods, and reinforce and enhance the existing neighborhood. A range and mix of unit types and tenure (ownership, rental) of affordable and employee housing for residents is desired.
2. Create a vibrant neighborhood that is respectful of surrounding established uses and park/open space areas, and that enhances the quality of life for existing and future residents.
3. Contribute and address the Town's goals of providing intercept parking, encourage transit ridership, and lowering vehicle miles traveled (VMT) and associated emissions.
4. In addition to the neighborhood residential uses, new development should incorporate other uses beneficial to the neighborhood and the community, such as community-serving accommodations and neighborhood-serving or transit-oriented commercial uses. Specifically, accommodations may include lodging for visitors that participate in community sporting, science, or other similar events. Neighborhood serving commercial would be designed for convenient access to residents and fulfill basic needs.
5. Include as a part of the designs, neighborhood amenities such as child care facilities, playgrounds, pocket parks and other public spaces.
6. Plan for efficient and usable pedestrian connections throughout the area, particularly to and from the River Trail, open spaces, and winter access to Lift 7.
7. Parking associated with new development should be provided as required by the Telluride Land Use Code and integrated into the specific plans.
8. Pedestrian and Traffic circulation throughout the plan area and adjacent lands should be implemented pursuant to the recommendations of Section 6.

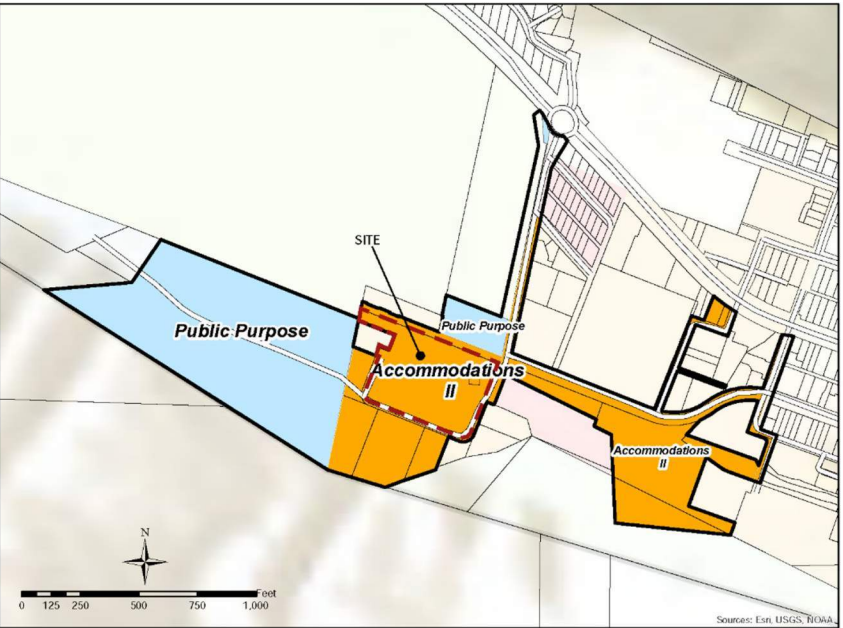

SACP Guiding Concepts

APPENDIX

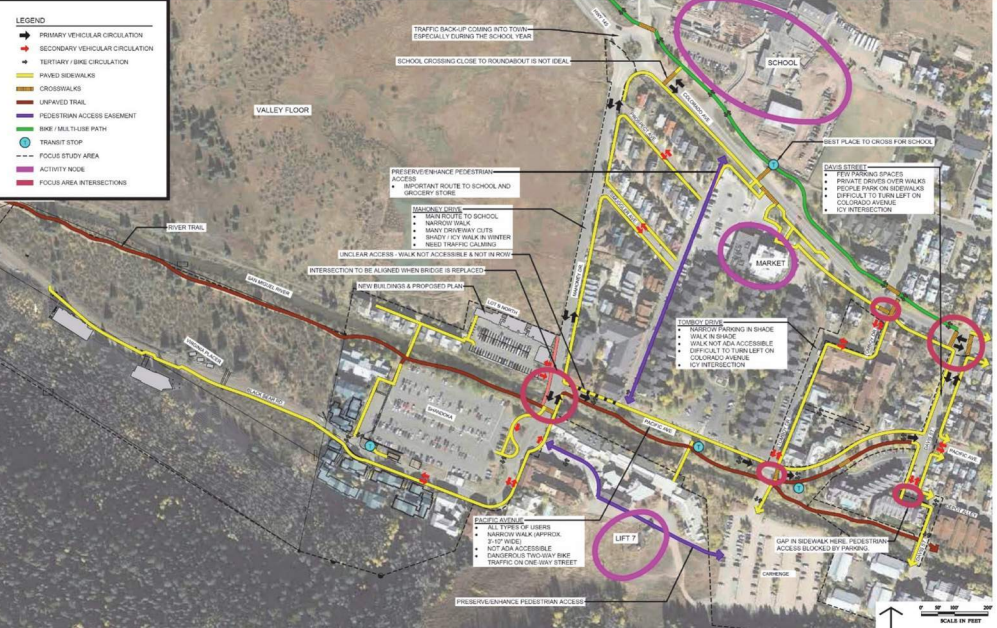

KEY TAKE-AWAYS FROM PUBLIC INPUT

1. Circulation/Connectivity – bikes and pedestrians are priority. Safety and access to the school are important.
2. Parking is insufficient and needs to be increased.
3. Housing – create more housing for workforce within a mixed-use setting
4. Neighborhood character should be vibrant and well served.
5. Open Space and parks are needed. Celebrate the river trail.
6. Neighborhood amenities should fit the context and be compatible with the neighborhood character.
7. Traffic calming is important but flashing lights, etc. may not fit Telluride.
8. Potential west side boardwalk at Mahoney with a crosswalk prior to the roundabout.
 - a. Pacific – one way circulation is preferred by most residents, river trail, sidewalk circulation issue at Lulu City.
 - b. Tomboy St. is very narrow.
 - c. Davis - issues at Colorado slope of Davis, winter drainage etc. Parking on private lots dominates the streetscape. Need to improve pedestrian presence.
9. Transit – system is great, continue to work to improve and adapt stops as area Redevelops.
10. Pedestrian traffic to/from Clark's Market needs consideration for planning and circulation. This well-used pedestrian corridor is adjacent to the study area.
11. There are some pedestrian easements that the Town will try to get more information about over to the planning team.
 - a. Owl meadows
 - b. Bridge at Entrada for Valley Floor access
 - c. From Shandoka lot to Lift 7
12. Concerns about density of infill development on parking areas. Needs to be designed to be livable and accommodate parking on-site

What we heard

Opportunities presented 8-3-2022

OPPORTUNITIES presented

- Design consistent with Southwest Area Conceptual Principles
- Increase intercept parking for commuters and provide transit oriented uses proximate to parking and a new local/ regional transit hub
- Provide parking for others requiring daylong parking, such as skiers; and potentially provide limited overnight parking for the community
- Expand the number of resident occupied, affordable and employee housing units
- Minimize vehicular congestion and associated air quality impacts
- Enhance existing streets and sidewalks
- Improve existing intersections
- Enhance Pedestrian/Bicycle/Vehicular Connections
- Encourage transit ridership
- Introduce traffic calming features
- Enhance San Miguel River Park experience

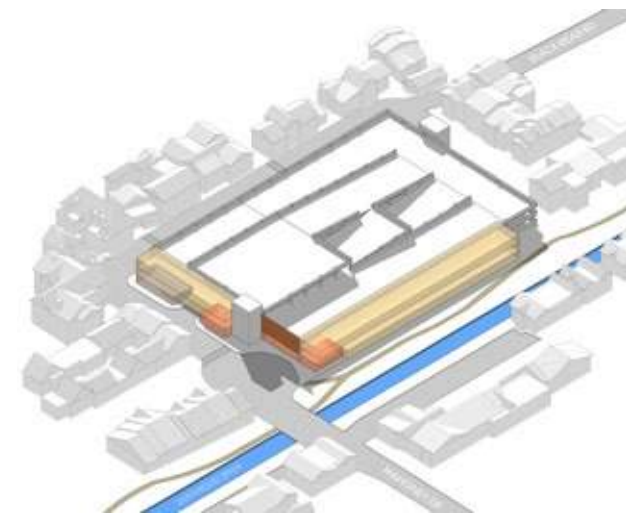

ADDITIONAL OPPORTUNITIES heard

- Energy efficiency/energy reduction – approaching net zero. Set a high bar
- Transit stop location – study best Location
- Study pedestrian flows to town, to base, to residencies
- Flow of skiers – from Lot L – through Cimarron to lift (purposeful path)
- Align with CLIMATE ACTION PLAN!
- Provide EV Charging
- Design – be mindful of the 5th Elevation
- River access/boating (SUP)
- Drop levels – Partial Subgrade
- Public Spaces
- Green spaces
- Solar
- Vertical Gardens, Raised beds, Hops
- Snow storage
- First level clearance to accommodate Sprinter/Work vans (approx 10’-6” vehicle height)

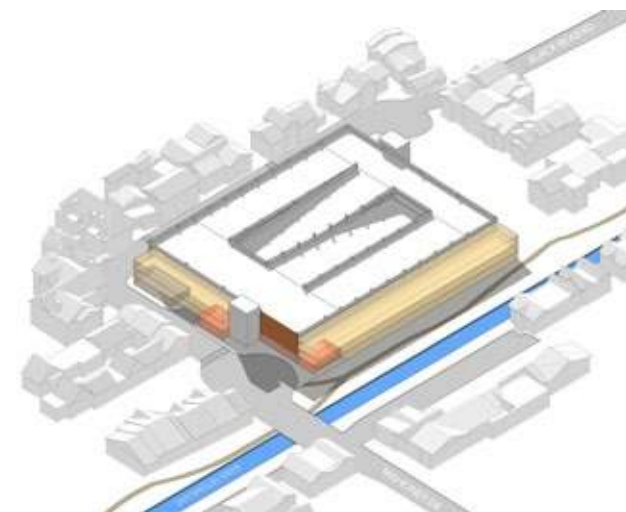

Opportunities presented 8-31-2022

OPPORTUNITIES presented

Concept A – 3 Level (Plus) Parking Structure
3 Story Residential

Concept B – 4 Level Parking Structure
3 Story Residential

ADDITIONAL OPPORTUNITIES heard

- Space to the west of the parking facility could provide opportunities for other neighborhood amenities
- Provide restrooms by transit center
- Reduce transit-oriented use SF, there may not be a need for 5,000 – 10,000 SF
- Additional parking could be achieved through a 5th level that would result in a parking structure height below 50’
- Mass and scale is an important consideration for the neighborhood, but the SACP identifies higher density
- Add more bike and e-bike biking (with power for charging) – bikes are getting bigger / trailers / panniers
- Consider providing more green space/ setback space along Mahoney, Black Bear and River
- Employ technological solutions to improve efficiency and to ensure existing residents have spaces
- Untangle vehicular and pedestrian circulation
- Pedestrian bridge over Mahoney
- Maintain the two current bus drop-offs
- Let’s see Concept B – PLUS! Prioritize open / amenity space by going vertical

Constraints presented 8-3-2022

CONSTRAINTS presented

The existing 330 car Shandoka parking lot currently satisfies the required off-street parking for the adjacent Telluride Housing Authority (THA)-owned Shandoka apartments and private developments, and also provides general day-use public parking and skier parking [as part of the Telluride Ski Area's obligation under its Special Use Permit with the United States Forest Service]

ACCOMMODATIONS II Zoning

- 40 FT height limit (50 FT height limit if approved pursuant to PUD review)
- Shall not exceed 50% site coverage Limit (up to 60% if approved pursuant to PUD review -106,000 SF maximum site coverage)

Setbacks

- Minimum setbacks and bulk plane setbacks from River Trail required
- Minimum bulk plane along the River Trail of 1 horizontal foot for each 1.5 vertical feet
- Setback of at least 50 feet from River Trail for intense commercial uses (unless such uses are authorized and approved by P&Z)

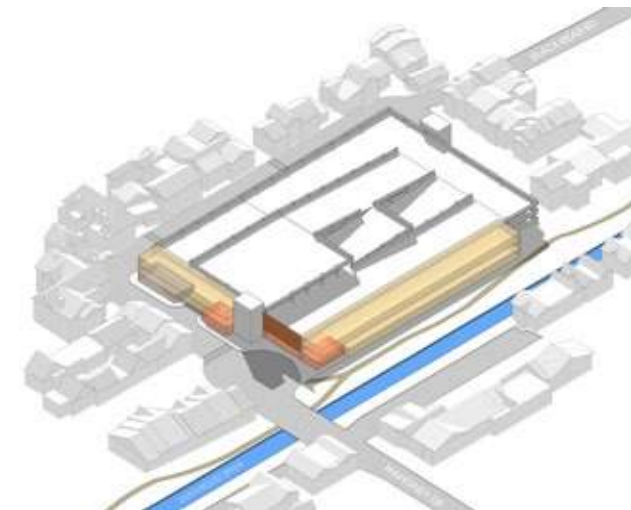

ADDITIONAL CONSTRAINTS heard

- Preserve existing river fronting trees
- Incorporate - (existing) trash/ingress/egress
- Bike Storage
- Safety - Considerations along Mahoney
- Efficiency in parking structure
- Safe routes to school
- Be mindful of drainage:
 - Carbons washed down in structure
 - Lot/site coverage/storm ceptors/rain gardens
- Lighting - Light trespass from site - visible light sources off site
- Big buses - scale of vehicles bringing big groups

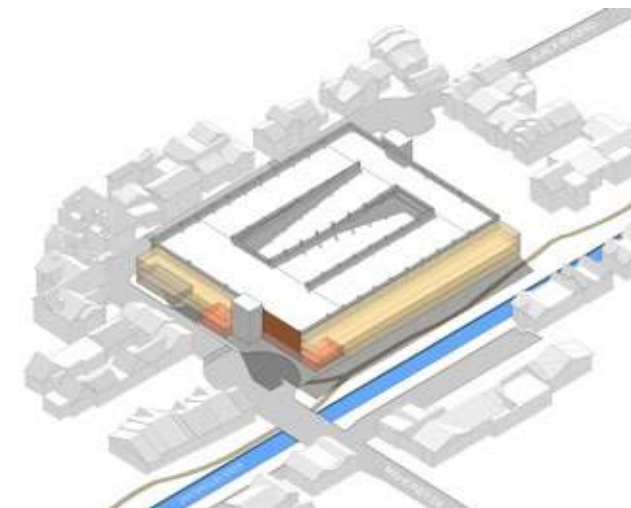

Constraints presented 8-31-2022

CONSTRAINTS presented

Concept A - 3 Level (Plus) Parking Structure
3 Story Residential

Concept B - 4 Level Parking Structure
3 Story Residential

ADDITIONAL CONSTRAINTS heard

- Maintain 960 parking spaces (do not reduce, do not increase)
- Shandoka Maintenance / Storage should not be on a prime corner
- Shandoka Maintenance / Storage shown is insufficient
- The existing bus loop is insufficient for a large bus to turn around (big tour buses get stuck, blocking traffic)
- The taller the structure gets, the more it affects the livability of people who live in adjacent residential properties, particularly on the lower levels
- Provide fire and trash access to Shandoka and Creekside
- Concept B - a taller structure will obstruct views / disconnect residents from the mountains
- Only locate transit-related uses
- Push safety - traffic and pedestrian flows need to be further separated
- Snow management solutions
- Desire for a quality pedestrian flow to ski area

Ideas Beyond this Project

Ideas Beyond the Scope of this Project heard:

Building on the Southwest Area Conceptual Plan:

- Replacement of existing Telluride Housing Authority units
- Add and improve the neighborhood amenities such as childcare, playgrounds, pocket parks and public spaces
- Redevelop Carhenge
- Realignment of Mahoney
- River trail improvements/realignment
- Considerations for RV parking

ADDITIONAL Ideas Beyond this Project heard:

- Additional amenities are desirable (gym, restaurants)
- Consider additional community uses on the ground floor
- Any new community uses should be for neighborhood/resident use only so as not to bring more cars to the site
- Specific Operational approaches: Fees for parking, designated parking for residents, designated parking for private maintenance vehicles

Building on the Southwest Area Conceptual Plan:

- This neighborhood has the highest density in Telluride – provide more mixed use (restaurants, retail)
- Shandoka redevelopment plans call for parking on the ground floor (no residential)
- Update the traffic study; a lot has changed since covid
- Specific approaches to pedestrian flow to ski area

4 Program

Program

Goals for the Lot L Feasibility Study & Concept Plan

These goals and program elements came directly from the recommendations for Lot L as outlined in the Southwest Area Conceptual Plan.

- Approximately 960 vehicle, multilevel (3 to 4 levels) parking structure. The new parking structure would provide 300+ new commuter spaces, in addition to the current number of Lot L spaces (330+/-) and the relocated spaces from Carhenge (288+/-).
- Approximately 35 - 45 resident-occupied, affordable and employee units wrapping along north and east facades of the parking structure, which would serve to architecturally screen the structure from the north and east. Parking for new resident units would also be incorporated into the structure.
- Approximately 5,000 - 10,000 SF of ground floor, transit-oriented commercial uses and new local/regional transit hub located at the northeast or eastern portion of Lot L (incorporated into the parking structure)
- New local/regional transit hub
- Shandoka bike parking & waste and potentially maintenance shop space

Current Program for Lot L:

- A. 960 vehicle 4 level parking structure inclusive of electrical and facility storage space
- B. 35 - 45 resident-occupied, affordable and employee units
- C. 3,280 SF of ground floor, transit-oriented use
- D. New local/regional transit hub
- E. Shandoka bike parking & trash / recycling / composting (no maintenance shop currently included)
- F. Public restrooms

Concept Plan Program

Telluride Lot L - Feasibility and Concept Plan Program					
Space Name	Original/Existing Program (Qty or SF)	Current Program Quantity	Current Program (SF)	Other Requirements	Comments
Large Bus Turnaround		1	0	Provide turnaround for large bus - currently RFTA-style 95' outside turning diameter	Provide turnaround on Mahoney
Shuttle Bus Turnaround (Galloping Goose)		1	0		Provide turnaround Black Bear for pick up near childcare center
Parking Spaces	960	960	312,000	Provide height clearance on first floor for Sprinter vans (10'-6"), provide code required ADA parking spaces (20) including van accessible spaces throughout all levels of the garage, provide EV and EV ready parking spaces	325 SF per space efficiency
Restrooms	0	4	320	Locate near transit hub/Mahoney entrance	Recommending unisex single user toilet rooms, 4 fixtures
Transit Oriented Use	5,000 - 10,000 SF	1	3,280	Locate near transit hub/Mahoney entrance; adjacent to utilities (water/sewer), HVAC, refrigeration considerations, deliveries, "back of house", trash/recycling proximity	"Transit Oriented Use" envisions a use that supports the transit/commuter nature of the parking structure a use similar to a coffee shop, grab and go or convenience store type retail, opportunity for Visitor Welcome Center. Double height space can accommodate a mezzanine.
Garage Maintenance/Storage		1	1,200	Storage for salt/sand, cones, barriers, shovels, brooms, etc	
Shandoka Maintenance/Storage	0	0	0	During work sessions, 2500 sf of maintenance serving existing residential needs was considered as an addition to the program. It required convenient loading/unloading, access by residential maintenance staff and 2500 SF minimum space to be feasible.	Not included in final concept scheme.
Garage Mechanical/Electrical		1	800	Electrical/Mechanical Space to support Garage functions/potential solar	
Trash/Recycling	1736 SF	2	2,240	Provide for convenient access to serve existing residential as well as new residential	
Resident Bicycle Parking	1024 SF	2	1,190	Provide for convenient access for residents and commuters; provide space to accommodate bike trailers, E-bike charging	Consider wall racks, ensure adequate space
Commuter Bicycle Parking		1	1,420	Provide for convenient access for residents and commuters; provide space to accommodate bike trailers, E-bike charging	Consider wall racks, ensure adequate space
Snow Handling				Snow Management - operational (move/haul snow) or integral (snow melt systems) can be incorporated with no to minimal loss of parking spaces	Snow management alternatives - Operational, Snow Dragon/Melter systems, Snow melt/glycol systems.
Residential Units	35-45 Units	29	35,500	Accommodates 29 - 1 and 2 bedroom units at 3 floors along the river side and a single floor along Mahoney. Adding a floor will add another 14 units for a total of 43 - 1 and 2 bedroom units	Architectural articulation will be important along the river side and the east side along Mahoney, opportunity along Black Bear as well. The residential square footage along Mahoney could be utilized for other uses (commercial/office) as needed.
Residential Support (circulation, common area, mail, package delivery, building management)		0.2	7,100		
Total Program SF			365,050
